

**Keep your employees safe,
wherever they are.**

FindU[®]

Emergency response. Wherever you are.

New Health and Safety at Work Act, new responsibilities.

Under the new Health and Safety at Work Act, new responsibilities will be in force for everyone in the workplace to ensure the safety of workers and anyone affected by their work. The Act will require a business or undertaking to conduct effective and ongoing risk management, and those in governance roles will have specific duties in ensuring due diligence is carried out to manage key health and safety risks.

The new Act extends responsibility for health and safety not only to direct workers, but also to contractors, subcontractors, employees of contractors, outworkers, labour hire workers and trainees.

For many organisations, their operations involve workers working alone or in hazardous or remote locations. Upcoming regulations will require a PCBU to manage the risks associated with remote or isolated work, with a specific requirement to ensure a system of work that includes effective communication with the worker. Failure to comply with these requirements could lead to convictions, not only for the PCBU but also for individuals.

As an on-demand personal security service, ADT FindU will assist PCBUs with meeting these requirements by providing a direct means of communication, not only to the PCBU themselves but also to ADT Security, as-and-when activated.

What is a PCBU?

A Person Conducting a Business or Undertaking (PCBU) is judged to be in the best position to control risks to health and safety in the workplace. A PCBU is defined as entities, employers, principals, self-employed and persons controlling a place of work such as a manager or supervisor.

ADT FindU provides peace of mind for you and your employees.

Unique to ADT, New Zealand's largest electronic security provider, ADT FindU is a simple to use, on-demand personal security service, turning your employees' smartphones into personal security devices. ADT FindU is ideal for companies whose operations involve either working alone, or in highly hazardous or remote areas.

You can't be there 24/7, but ADT FindU can.

In the event of an emergency, ADT FindU users can activate the app and trigger an alert by either shaking or swiping the smart device. ADT FindU is directly integrated into ADT Security's professional graded response centre, showing a real-time location of your employees and their subsequent movements. This allows ADT Security to alert emergency contacts and despatch the agreed emergency response, including Fire, Ambulance, Police or Security patrols.

In duress emergencies, ADT FindU is built with three unique alarm profiles; Basic, Deterrent and Stealth. ADT understands that the situations your employees may find themselves in are unique to you and therefore require different approaches to raising an alert/alarm, as it may not always be safe to let an attacker know that an alert has been raised.

Proven worldwide to enhance employee safety in a variety of applications.

 Commercial and lone workers	 Schools and universities	 Government and councils	 Hospitals and medical practitioners	 Energy and utilities
 Builders and construction workers	 Farmers and agricultural workers	 Logistics and trucking workers	 Security guards and patrols	 Real estate agents

Multiple uses that can be customised to your business's needs.

Journey

Ensures safe and confident travel of employees by providing real-time updates of their movements as they move between two places.

Meeting

Allows employees to identify when they're going to a potentially dangerous scenario or working alone. An alert will automatically be created if the timer expires or they don't cancel the meeting.

Man Down

Provides extra protection for employees in situations where injury or personal immobilisation is a possibility by flagging sudden deceleration, non-movement and impact.

Danger Zone

Alerts employees via an in-app push notification when they're entering an area that might not be safe or where they may encounter a dangerous situation.

Mass Notification

Provides instant communication to ADT FindU users whether they're logged into the application or not.

Duress PIN

If employees are being forced to cancel an alert they can enter the Duress PIN. The alert will appear to have been cancelled, but will remain active in the ADT monitoring centre and we'll know you've been forced to cancel an alert.

Soft Alert

Allows employees to quickly trigger an alert by pressing the volume up key. *Not available on all operating systems.*

Heartbeat/Pulse

Confirms the App is working by producing a light recurring vibration. Heartbeat will confirm an alert has been raised by vibrating after activation.

Web Alert

When employees raise an alert or start a journey, business contacts can receive a link to a real-time monitoring page that shows essential information and employee current location.

Profile

Allows employees and businesses to update personal information, view alert/journey history and change passwords.

How ADT FindU works.

Step 1

Activate the ADT FindU application before you begin a task or enter a high-risk area. ADT FindU will run even when the device is screen locked.

Step 2

In the event of an emergency, either shake or swipe the device until the alarm is activated. Continue to shake to sound an alarm and activate strobe light which can act as an immediate deterrent.

Step 3

An alert has been activated. ADT has been notified and the emergency recording features have been activated, including audio and visual footage. We will continue to monitor until the alert has been cancelled or resolved.

Step 4

The ADT monitoring operator receives the emergency alert, and actions agreed procedures. At this stage the ADT operator can dispatch a Security Patrol Officer, the Police, Fire Brigade or Ambulance.
